Subject Index

A

Abstract classes, 557

Abstract data type, 550

Access rights, 485–486

Accessor method, 548, 552

ACID transactions, 450–451

ADKAR, *See* Resistance to change

Aggregate functions, 399–423

Aggregations, 551

All-key relations, 96–97

ALL PRIVILEGES, 486

ALLOCATE DESCRIPTOR, 647–648

ALTER TABLE, 209–212

Analytical processing, 6

Anomalies

  Deletion, 148, 151, 154–155

  Insertion, 147–148, 151, 154–155

  Modification, 148, 151, 154–155

  Update, 148, 151, 154–155

ANY, 371

Application classes, 550

Arithmetic

  Operator precedence, 387–388

  Operators, 387

ARRAY, 573–575

Assignment, 619–620

Association classes, 567

Attributes

  Definition of, 55

  Domains for, 64–66

  Multivalued, 58–60

  Single-valued, 58–60

Authorization Matrix, 485–488

AVG, 403

B

Backup, 490–492

Base class, 554

Base tables, 91–92

BASE transactions, 594

BEGIN/END, 619

DO NOT COPY rituadhikari20@yahoo.com

Printed by: rituadhikari20@yahoo.com. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

BEGIN/END, 619

Biometrics, 481

Big data, 585

BIT, 198

BIT VARYING, 199

Black hat hackers, 473–474

BLOB, 199

BOOLEAN, 198

Boyce-Codd normal form, 153–154

Brute force attacks, 474–475

Buffer overflow attacks, 474, 479

Business rules, 82

C

CALL, 627

Candidate keys, 153–154

Cardinality, 219

CASE, 396–398, 622–623

CASE software

- Capabilities of, 216–217
- Data dictionary, 220–226
- Data flow, 216–217
- ER diagrams, 217–219
- Generating SQL, 227
- User interface design, 227–229

CAST, 404–406

Catalogs, 192

Catalog, *See also* Data dictionary

Centralized database, 12–14

CENTURY, 393

CHARACTER (CHAR), 199

CHARACTER VARYING (VARCHAR), 199

Character data, *See* Strings

CHECK, 196, 209, 211

Checkpoint, 453

Chen method ERDs, 71–73, 78

Circular inclusion constraint, 160

Circular relationships, 305–306

Classes, 550–551, 554, 578–579

Client/service database, 12–14

Cloud storage

- Advantages of, 21
- Architecture for, 19–20
- Problems with, 21

Clustering, 166–167

Clusters, 192

CODASYL, 610–612

Codd, E. F, 171

Column, 587–588

Columns

Columns

- Adding, 109
- Data types for, 197–200
- Definition of, 90–91
- Missing, 511
- Modifying definition of, 210–211
- Naming, 193
- Renaming, 212

Complex network data model, 612–616

Commit, 450

COMMIT, 466, 632

Common table expressions, 442–445

Composite entities, 77–81

Composition, 558–559

Computer-aided software engineering, *See* CASE software

Concatenation, 57, 77–81, 389

Concatenated keys

- Joining using, 124–128, 358–359
- Primary keys, 96

Concurrency control

- ACID transactions, 450–451
- Definition, 449
- Dirty read, 458–459
- Distributed database issues, 469–470
- Inconsistent analysis, 457–458
- Isolation levels, 467–468
- Locking, 461–466
- Logging, 451–453
- Lost updates, 454–457
- Nonrepeatable read, 459–460
- Optimistic, 466–467
- Phantom read, 460–461
- Problems without, 454–461
- Recovery, 453–454
- Rollback, 451–453
- Timestamping, 467
- Transaction length, 466
- Transactions, 450–454
- Web issues, 468–469

Constraints

- CHECK clause, 209, 211
- Circular inclusion, 160
- Domain, 64
- Foreign key, 99–101, 202–205
- Not null, 200
- Primary key, 57, 92–96, 178–179, 200–202
- Table, 209–210
- UNIQUE clause, 208–209

Constructors, 552

Container classes, 551

Data consistency, 49–51, 517

Data dictionary, 102–104, 175, 220–226, 485–488

Data flow, 82–86, 219–220, 250–252

Data independence, 177–180

Data mart, *See* Data warehousing

Data mining, 499

Data models

- Definition of, 55
- for Data warehousing, 502–506
- Schemas, 86–87
- Versus data flow, 82–86

Data models, *See also* Relational data model

Data modification

- Deleting rows, 433–436
- Inserting rows, 429–432, 435–436
- Modifying rows, 432–433, 435–436

Data quality

- and Data formatting, 518
- and Referential integrity, 517–518
- Business rules and, 514–515
- Definition, 509
- Employees and, 519–520
- Incomprehensible data, 515–516
- Incorrect data, 512–513
- Importance of, 509–510
- Incomplete data, 510–512
- Inconsistent data, 517
- Missing columns, 511
- Missing primary keys, 512
- Missing rows, 510–511
- Wrong calculations, 513
- Wrong codes, 512–513
- Wrong data, 514

Data relationships

- and business rules, 82
- Circular, 305–306
- In the relational data model, 97–101
- Mandatory, 70
- Many-to-many, 69–70, 76–80
- Mutually exclusive, 306
- One-to-many, 69
- One-to-one, 68–69, 306

Data store, 6

Data types

- Changing, 404–406
- Lists of, 65, 197–200
- Object-relational, 572–577

Data warehousing

- Appliances, 505–507

One-to-one relationships, 68–69, 306

Online analytical processing, 6

Online transaction processing, 6

Open source DBMSs, 25–26

Optimistic locking, 466–467

ORDER BY, 333–336, 416–419

OUT, 583

Outer join, 128–133, 367–368

OVER, 416–419

Overlapping candidate keys, 153–154

OVERLAPS, 194–295

P

Parameters, 620, 630–631

PARTITION BY, 416–419

Partitioning, 167–168

Partitions, *See* Windowing

Passwords, 480, 485

PERCENTILE_CONT, 426–427

PERCENTILE_DISC, 426–427

PERCENT_RANK, 423

Performance tuning, *See* Database optimization

Perimeter security, 476–478

Persistent stored modules, *See* SQL programming

Phantom read, 460–461

Physical schema, 86–87

Physical security, 472, 479–480

Polymorphism, 557–558

Post-relational data models, 560–565, 586–594

Precedence (of arithmetic operators), 387–388

Precision (of a real number), 65

Precompiler, 628

Predicates

  Definition of, 117

  For joins, 124, 255–357, 362

  Set functions in, 404

  UNION vs. OR, 376

Predicate, *See also* WHERE clause

PREPARE, 648

Prerelational data models, 599–616

PRIMARY KEY, 200–202

Primary keys

  Concatenated, 96

  Constraints, 57

  Creating, 200–202

  Missing, 512

  Rules for, 92–96

Privacy, 22–23, 471

Procedures

Definition, 617
Examples of, 625
Creating, 617–618
Product (relational algebra), 122–124, 355–356
Programming, *See* SQL programming
Project (relational algebra), 112–116, 118, 141
Prototypes (in object-orientation), 558
Prototyping, 37–38, 271–279

Q

Quality of data, *See* Data Quality
QUARTER, 393
Query optimizer, 163

R

RANK, 420–423
Read locks, 464–465
REAL, 198
Record, 599
Recovery, 453–454, 492–494
Recursion, 442–445
Referential integrity
Definition of of, 99–101
Requirements for, 178–179
SQL deletes and, 434
Unenforced, 517–518
Versus object-oriented data model, 560–564
REF, 577–582
REFERENCES, 486
RENAME, 212
Relational algebra
Definition of, 107–108
Difference, 136
Divide, 138
Intersect, 136–13
Join, 119–135
Product, 122–124
Project, 112–116, 118
Restrict, 116–118, 122–124
Union, 118–119
